

Matlab / Simulink

Formatting your m-script for publishing your code

```
%% Formatting for publishing your code
%
% Below some examples to write your code in such a way that enables ea
sy
% publication to HTML or PDF
%
% "%% " at the start of a lin indicates a new "cell" or paragraph.
% Try the menu command "Publish, Publish" once to see the result.
%
% Use %<newline> and then two spaces after the % sign for preformatted
text like
%
%   Preformatted Text1
%   Preformatted Text2
%
% Use %<newline> and then three spaces after the % sign to show Matlab
code like
%
%   for x = 1:10
%       disp(x)
%   end
%
% This example allows you to include equations with the aid of LaTeX c
ode:
% $$\overline{A} + \overline{B} = \overline{A \cdot B}$$
%
% Use |text| to display text in a monospaced font. Handy to display
% computercode for example: |Longitude = "4.890934";|
```
